                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 11

                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 17, Application US/08630916A

Sequence 17, Application US/08630916A

Patent No. 6011137

GENERAL INFORMATION:

APPLICANT: BLOAZE, Gregorio

APPLICANT: RAy, Brian K.

TITLE OF INVENTION: DEWRIFTCATION AND ISOLATION OF NOVEL

TITLE OF INVENTION: DOLYPEPTIDES HAVING WW DOMAINS AND METHODS OF USING SAME

NUMBER OF SEQUENCES: 124

CONTRESPONDENCE ADDRESS;

ADDRESSEE: Pennie & Edmonds

STREE: 1155 Avenue of the Americas

CITY: New York

COUNTRY: United States

ZIP: 10036-2711

COUNTRY: United States

ZIP: 10036-2711

COMPUTER: IBM PC Compatible

OPERATION TYPE: Ploppy disk

COMPUTER: DAPPLICATION NATA:

MEDILOATION NATE: PLOPPY DEAP

ATTORNER'S APPLICATION NATE: 10, Version #1.30

CLASSIFICATION: AS LESLIE

REGISTRATION NUMBER: 10, 096630, 916A

ATTORNER'S APROPER'S LIB STATE: 10, 097909090

TELEPRATION TOWNER: 10, 0969630, 910A

TELECHONE: (212) 790-9090

TELECHONE: (212) 790-9090

TELECHONE: (212) 790-9090

TELECHONE: CARRACTERSTICS: 1786

SEQUENCE CHARACTERSTICS: 1786

SECUENCE CHARACTERSTICS: 1786

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence

Novel ubiquitin-protein ligase family member 50352 useful as diagnostic targets and therapeutic agent for controlling 50352 associated disorders such as neural tube defects, perinatal brain injury, hypoxia, ischemia.

Disclosure; SEQ ID NO 5; 53pp; English.

The invention relates to the human ubiquitin-protein ligase 50352 polypeptide and the polynucleotide encoding it. The polypeptide is useful for treating 50352-associated disorders such as neural tube defects, forebrain anomalies, posterior fossa anomalies, syringomyelia, colon tumours and cerebrovascular diseases such as hypoxia, ischaemia and infarction. The 50352 polypeptide and its modulators can act as therapeutic agents for controlling cellular proliferative and/or

The present sequence is a consensus HECT (homologous to E6 carboxyl terminus) sequence. A HECT sequence is found within the catalytic carboxyterminal domain of the HECT E3 ubiquitin ligase. The sequence is provided in a specification relating to a method for screening for agents that modulate transforming growth factor (TGF)-beta and/or bone to morphogenic protein (BMP)-mediated signalling. The method involves evaluating the effect of an agent on binding of HECT E3 ubiquitin ligase who the cellular levels of Smad protein by E3 ubiquitin ligase, or on the cellular levels of Smad protein by E3 ubiquitin ligase, or on the cellular levels of Smad protein by E3 ubiquitin ligase, or on the cellular levels of Smad protein by E3 ubiquitin ligase activity. The method is useful for stimulating bone formation in a patient or treating a condition associated with insufficient TGF-beta and/or BMP-mediated cell signalling. Agents that inhibit BMP-mediated signalling are useful for treating inflammation, ageing, cancer and infectious diseases. Agents that augment BMP-mediated signalling are useful for treating cancer, Agents that inhibit TGF-mediated signalling are useful for treating cancer, that inhibit TGF-mediated signalling are useful for treating cancer, inflammation, neurodegeneration and fibrosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  þ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Screening for modulators of TGF-beta and/or bone morphogenic protein (BMP) mediated signaling useful for treating cancer and osteoporosis bevaluating the ability of agents to modulate Smad protein degradation.
                                                                                                                           рe

The invention describes an isolated nucleic acid molecule (I) encoding a novel central nervous system protein. (I) and polypeptides (III) encoded by (II), are used to treat a medical conditions and in diagnosis of a pathological condition. Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative clisorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiovascular disorders e.g. Alaheimer's disease and amylotrophic lateral sclerosis, infections caused by bacteria, viruses e.g. Acquired immunodeficiency virus (AIDS) and fungi, ocular disorders e.g. corneal infection, gastrointestinal disorders e.g. disphagia, adenocarcinomas and irritable bowel syndrome, reproductive system disorders e.g. testicular feminisation, endocrine disorders e.g. diabetes and pituitary dwarfism, cancers and disorders at the cellular level e.g. leukaemia, disorders e.g. nonallargic rhinitis, renal disorders e.g. capiratory disorders e.g. nonallargic rhinitis, renal disorders e.g. capiratory disorders e.g. nonallargic rhinitis, renal disorders e.g. capiratory disorders e.g. nonallargic rhinitis, renal disorders e.g. infarction. The polypeptides can also be used to aid wound healing and capiral organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities, fat content, lipid, protein,

(HUMA-) HUMAN GENOME SCI INC.

Ruben SM; Rosen CA, Barash SC,

WPI; 2001-476159/51. N-PSDB; ADM19576. Isolated nucleic acid molecule encoding a channel/transporter protein is used in preventing, treating or ameliorating a medical condition.

Claim 11; SEQ ID NO 862; 809pp; English.

The invention relates to an isolated nucleic acid molecule encoding a channel/transporter protein or sequences at least 95% identical to a channel/transporter protein or sequences at least 95% identical to a chase. The nucleic acids and proteins encoded by them are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used to dispensing a parhological condition or susceptibility to a susceptibility to a pathological condition. The antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in diagnostic immunosasays e.g. radioimmunosasays or enzyme linked immunosorbent assays (ELISA). Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. concentration and social arthritis, cardiovascular disorders e.g. cardiovascular disorders e.g. cerbral isohemia, angiogenesis, nervous system disorders e.g. Alzheimer's disease, infections caused by acteria, viruses and fungi and ocular disorders e.g. corneal infection. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease constructions.

Human protein ubiquitin ligases publ (AAW13381), pub2 (AAW13385) and pub3 (AAW13386) are homologues of fission yeast publ (AAW13387) and were identified from cDNA clones (AAT47040-42) obtd. e.g. from a keratinocyte CDNA library. Pub polypeptides can be produced in transfected host cells. They can control the steady state level of cd25 phosphatese, the degree of CDK kinase (e.g. cdc2) dephosphorylation and the steady state level of p53 (controlling the degree of cell cycle regulation of p53). They can regulate cell or tissue differentiation, or cell growth or proliferation by affecting other proteins, can be a specific (ant)agonist of wild type protein function and may be used as immunogens to elicit a specific
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            655 WFWKAVEFFDEERRARLLQFVTGSSRVPLQGFKALQGAAGPRLFTIHQIDACTNNLPKAH 714

The specification also describes a Smurf1 polypeptide. Smurf polypeptides are negative regulators of Smad signal transforming and antagonists of bone morphogenic protein (BMP) or transforming growth factor-beta (TGF-beta) signalling pathway. Expression of Smurf1 in a cell is useful for polypeptides are useful for blocking chondrogenesis, osteogenesis, blood differentiation, cartilage formation, neural tube patterning, retinal development, heart induction and morphogenesis, hair growth, tooth formation processes, and hinder the regeneration, growth, maintenance, etc., of bone and other tissues that are dependent on the BMP pathway. The polypeptide is useful for screening for various drugs and/or antibodies that can either enhance the BMP pathway, or inhibit it
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WFWKAVEFFDEERRARLLOFVTGSSRVPLOGFKALOGAAGPRLFTIHOIDACTNNLPKAH 714

This invention relates to a method of differentially modulating the growth or differentiation of blood endothelial cells (BEC) or lymphatic condothelial cells with a composition comprisition an agent that differential cells with a composition comprisition an agent that differentially modulates blood or lymphatic endothelial cells. Treating hereditary lymphoedema comprises identifying a human subject with lymphoedema and with a mutation in at least one allele of a gene encoding a LEC protein, where the mutation correlates with lymphoedema in human subjects, and with the proviso that the LEC protein is not VEGRA-; and administering to the subject a composition composition composition and plymucleorides. The invention may be useful for the development of compounds with an antiangiogenic, cytostatic, the development of compounds with an antiangiogenic, cytostatic, composition antiinflammatory activity or for gene therapy. The method is useful in modulating the growth or differentiation of blood endothelial cells or lymphatic endothelial cells, in treating hereditary lymphoedema, in screening for an endothelial cells disorder or predisposition to the disorder or in monitoring the efficacy or toxicity of a drug on endothelial cells. The agent is useful in manufacturing a medicament for the differential modulation of blood vessel endothelial cells. The agent is useful in manufacturing a cell or lymphatic prowth agent may also be used in manufacturing a medicament for the treatment of hereditary lymphoedema resulting from a mutation in a control of other diseases involving the lymphatic system. The present sequence is that of a human LEC/BEC differentially control and a control of the method of the invention. We have not the method of the invention when the control and a control and a control of the method of the district of the method of the method of the district of the method of the district of the method 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          655 WFWKAVEFFDEERRARLLQFVTGSSRVPLQGFKALQGAAGPRLFTTHQIDACTNNLPKAH 714
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence does not appear in the specification but was obtained by the indexer using the source data given in table 14 of the specification

c expression by rectifying mutations or deletions in a patient's genome, that affect the activity of the DITHPs, by expressing inactive proteins or supplementing the patient's own production of them. (1) and (II) may be used to treat disease, for example, cell proliferative disorder, crohn's disease, acquired immune deficiency syndrome (AIDS), lymphoma, leukaemia, autoimmune disorders, and respiratory disorders. Additionally, (I) may be used to produce the DITHPs, by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) and its complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in camples, and therefore which patients may be in need of restorative therapy. (II) may also be used as antigens in the production of therapy. (II) may also be used as antigens in the production of antibodies against DITHPs and in assays to identify modulators of DITHP expression and activity. The anti-DITHP antibodies and antagonists may also be used as diagnostic agents for detecting the presence of DITHPs in samples (e.g. by enzyme linked immunosorbant assay (ELISA)). AAU19415-AAU19625 represent human diagnostic and therapeutic (DITHP) polypeptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       711 WFWKAVEFFDEERRARLLQFVTGSSRVPLQGFKALQGAAGPRLFTIHQIDACTNNLPKAH 770

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to polynucleotides (I) encoding diagnostic and therapeutic (DTTHP) polypeptides (II), which include e.g. enzymes, and proteins involved in growth and development and receptors. (I) and (II) may be used in the prevention, diagnosm data treatment of diseases associated with inappropriate DITHP expression. For example, (I) and (II) may be used to treat disorders associated with decreased polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            R, Spiro PA, Banville SC, Shah P, Chalup MS, Chang SC; D'sa SA, Amshey S, Dahl CR, Dam TC, Daniels SE, Dufour GE; Fong WT, Greenawalt LB, Hillman JL, Jones AL, Liu TF; AM, Rosen BH, Russo FD, Stockdreher TK, Daffo A; Ya PE, Yu JY, Bradley DL, Bracher SR, Chen W; Hodgson DM, Lincoln SE, Jackson S;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Polynucleotides encoding diagnostic and therapeutic proteins, e.g. enzymes, hormones and receptors, useful in diagnostics and therapeutics.

The invention relates to a complex between two interacting proteins in adipocyte cells, given in the specification. The proteins are identified by selecting a bait protein from a known adipocyte marker and then by selecting a bait protein from a known adipocyte are identified by selecting a bait protein show is a performing a past 2-hybrid selection to isolate prey proteins encoded by members of an adipocyte cDNA library. The proteins are designated SID (RTM) (selected interacting domains) proteins. Also included are a recombinant host cell expressing at least one of the interacting polypeptides of the complex, selecting a modulating compound in adipocyte cells, a SID (RTM) polypeptide comprising any of the 738 anion acid cells, a SID (RTM) polypeptide comprising any of the 738 nucleotide sequences given in the specification (including its fragment or variant), a vector comprising the vector, a protein chip comprising the polypeptides and a reconficating all or part of the data, listed in the specification.

The complex, polypeptides, polynucleotides and compounds are useful for preventing or treating metabolic disorders such as obssity or diabetes. The polynucleotides are useful as probes or primers. The complex is particularly useful for identifying selected interacting domains (SID (RTM)) for screening drugs that modulare the protein interaction, thus exhibiting the therapeutic effect. The present sequence represents a SID

antagonist of the polypeptide or an antibody that binds to the comprising a combination with a carrier; (8) an article of manufacture comprising a container, a label on the container and a composition of matter of (7); (9) a method of treating an immune related disease in a mammal; (10) a method for determining the presence of a PRO polypeptide in a sample suspected of having the polypeptide; (11) a method of diagnosing an immune related disease or an inflammatory immune response in mammal; (12) a method of identifying a compound that inhibits or minics the activity of or expression of a gene encoding a PRO polypeptide; and (13) a method of stimulating the immune response in a mammal. The PRO sequences have antiallergic, antianaemic, antiathricic, antiallergic, antiinflammatory, antipporiatic, antithyroad, CNS, dermatological, gastrointestinal, nemostatic, hepatotropic, immunostimulant, immunosuppressive, muscular, nephrotropic, neuroprotective, osteopathic, respiratory, vasotropic and virucide activities, and can be used in gene therapy. The nucleic acid virucide activities, and can be used in gene therapy. The nucleic acid useful in diagnosing and treading an immune related disease and in stimulating an immune response. The present sequence represents a human processing an immune related disease and in

```
The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, derivative or alleifuc variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell camporate is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially cappound that regulates the activity of one or more of the polynucleotides, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for identifying a compound useful in treating pain and a pharmaceutical composition of small molecule that regulates the activity of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more oplypeptides or their antibodies. The polynucleotide or the compound that (e.g. spinal segmental nerve injury (Ghung), chronic constitiction injury (CCI) and spared nerve injury (SNI) in an animal (e.g. gene therapy). The sequence presented is a rat protein (shown in Table 2 of the sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from wipo at the way obtained in electronic form directly from wipo at the print of the printed spared method in electronic form directly from wipo at the printed spared.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    92

                                                                                                                              that affects cell cycle progression. Its amino acid sequence was deduced from a cDNA clone (AAT62067) isolated from a Schizosaccharomyces pombe CDNA library. Disruption of publ elevates the level of cdc25 protein in vivo increasing the activity of the tyrosine kinases, weel and miki, required to arrest cell cycle. Loss of weel function in a S. pombe cell carrying a disruption in the publ gene results in a lethal premature entry into mitosis; such lethal phenotype can be rescued by the loss of cdc25 function. Human homologues (see also AAW13384-86) of fission yeast publ have been identified
               Human and Saccharomyces pombe protein ubiquitin ligase(s) - involved in cdc25 phosphatase and p53 ubiquitination, and regulate cell growth and
                                                                                                                Fission yeast protein ubiquitin ligase publ (AAW13385) is a polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      diagnostic and therapeutic polynucleotide; dithp; antiarteriosclerotic;

The invention relates to a novel isolated human diagnostic and the invention relates to a novel isolated human diagnostic and the cherepetic polymucleotide (designated dithp). The novel dithp polymucleotide sequences rousisting of base pairs fully defined in the specification; a polymucleotide comprissing a naturally occurring polymucleotide a polymucleotide complementary to identical to the dithp polymucleotide; a polymucleotide complementary to identical, or an RNA equivalent of any of the polymucleotide management of any of the polymucleotide members of antiaherity incleotide or its polymucleotide members of antiaherity incleotide members of antiaherity incleotide or its polymucleotide members of antiaherity incleotide or its polymucleotide members of antiaherity incleotide or its polymucleotide members of antiaherity incleotide or incleotide members of antiaherity, antithyvoid, thyrominetic, antiaherity antiaherity incleotide hemostatic, antiherimatic, anticomulant, thromopolytic, anticoagulant, anorectic, vacotropic, and antiaher of protein replacement therapy. The dithp polymucleotides or DTHHP polymucleotides polymethic can be used in gene therapy and protein replacement therapy. The dithp polymucleotides or DTHHP polymucleotides are useful for diagnosing, preventing or treating diseases diseases include cancers (e.g. adenocarcinoma, leukaemia, melanoma, brain cancer, breast cancer, cervix cancer, bone cancer, liver cancer, lung cancer, breast cancer, cervix cancer, bone cancer, liver cancer, lung attentions or theropolytic and synchimic polymure/inflammatory disorders (e.g. Athroiditis, Crohn's disease, Graves, disease, thyroiditis, multiple sclerosis, osteoarthritis, relations (e.g. viral, bacterial, fungal or parasitic infection), developmental disorders (e.g. thyroiditis, multiple sclerosis, osteoarthritis, scleroderma, systemic lupus erythematosus), infections (e.g. thyroiditis, multiple sclerosis, disorders (e.g. thyroiditis, multiple sclerosis, disorders (e.g. thyroiditis, multiple sclerosis, diso

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                   Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 1

Sequence 4, Application US/09070060

Sequence 4, Application US/09070060

Patent No. 5976849

GENERAL INFORMATION:

APPLICANT: Hustad, Carolyn M.

APPLICANT: Ghildyal, Namit

TITLE OF INVENTION: Human E3 Ubiquitin Protein

TITLE OF INVENTION: Ligase

NUMBER OF SEQUENCES: 11

CORRESPONDENCE ADDRESS:

ADDRESSEE: ZENECA Pharmaceuticals, Inc.

Sequence 4725, Application US/10756149

Publication No. US20050181375A1

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: A212, Natasha

APPLICANT: A212, Natasha

APPLICANT: A212, Natasha

APPLICANT: A1bert

TITLE OF INVENTION: NOVEL METHODS OF DIAGNOSIS OF METASTATIC CANCER,
TITLE OF INVENTION: METHODS OF SCREENING FOR MODULATORS OF METASTATIC CANCER

TITLE OF PREBLOCATION NUMBER: US/10/756,149

CURRENT APPLICATION NUMBER: US/10/756,149

CURRENT FILING DATE: 2004-01-12

NUMBER OF SEQ ID NOS: 5818

SOFTWARE: Patentin version 3.2

SEQ ID NO 4725

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
